**DETAILED ACTION*****Examiners Amendment***

1. In accordance with the interview of Barry Schindler on 1/14/2005, the following amendment has been made to clearly define the claims and eliminate issues under 112 second paragraph:

In claim 5: in line 2 replace "substantially" with "proximate" and  
in line 3 replace "substantially" with "proximate" .

In claim 10: in line 2 replace "substantially" with "proximate" and  
in line 3 replace "substantially" with "proximate" .

In claim 46: in the claim history parenthetical in line 1, replace "new" with "previously presented" .

In claim 47: in the claim history parenthetical in line 1, replace "new" with "previously presented" .

Non-elected claims 14-45 have been cancelled.

3. This application is in condition for allowance but for the presence of claims 114-45 non-elected without traverse. Accordingly, claims 14-45 are cancelled.

ART UNIT: 3653

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

7. The following is an examiner's statement of reasons for allowance: The prior art neither discloses nor obviates a test strip dispenser having housing, container within housing, movable body connected to button, movable body configured to engage test strip and partially displace strip from container in movable body's first position upon a first pushing of a button, movable body configured to engage test strip and fully displace strip from container in movable body's second position upon a second pushing of a button.

Of particular interest was Pawlo which discloses a strip dispenser having housing, container within housing, movable body engaging test strip to displace strip from container, body connected to actuator, movable mechanism drives body into engagement and displace a test strip dispenser having housing, container within housing, movable body connected to button, movable body configured to engage test strip and partially displace strip from container in movable body's first position upon a partial pushing of a button, movable body configured to engage test strip and fully displace strip from container in movable body's second position upon a full pushing of a button.. However, in Pawlo et al. lacks a button to engagement linkage mechanism that cycles the engagement mechanism and its reliant strip at a period less than the as Pawlo et al. discloses the simpler button to engagement linkages that coincide depression to engagement and release to retraction, and only the mechanical button linkage of fig. 4 has

ART UNIT: 3653

a separate full exposure contrasted to partial exposure of the strip and that being a result of a partial button depression rather than a cycling of the button. .

Of further interest is Van Schie disclosing: a dispenser of rigid strips having housing, container within housing, movable body engaging test strip to displace strip from container, body connected to actuator, movable mechanism drives body into engagement a button-strip engagement linkage that results in a partial exposure of the strip out an opening and a movement to a second engagement position with full exposure of the strip a result of button release rather than the claimed system which cycles the engagement mechanism separately upon button cycling.

Draper et al. discloses a test strip dispenser having housing, container within housing, movable body electrically connected to button, movable body configured to engage test strip and partially displace strip from container in movable body's first position upon a first pushing of a button, movable body configured to engage test strip and fully displace strip from container in a subsequent cycling to movable body's first position upon a second pushing of a button. However, the engaging mechanism electrical linkage cycles the engaging mechanism one for one with the pushbutton with an incrementing of the strip upon the engaging mechanism.
